I have taken **Amazon** as the example for component hunt assignment.

Amazon is the popular e commerce website. It consists of several components that work together to provide a complete user experience.

Header is located at the top of the website, like

Amazon logo, search bar, user account or profile and the cart icon.

Navigation Bar is below the header, it includes

Home, product, detail and contact. Which can also include All categories, today's deal, customer service and orders.

Banner section this section includes:

Offers and discount, advertisements and seasonal sales.

Product section this is the main content area of the website which includes:

Multiple product cards, product name, price and images, rating and reviews.

And the last one is the **Footer section,** which includes:

About Amazon, contact information, social media links.
